Pocket Printing™

Bar Code Label Printing Add-on for Windows Mobile Devices

Looking for a mobile device-based label printing solution that offers advanced features like full WiFi compatibility, database support, and serialization capabilities, while still being easy to use? Then Pocket Printing is the add-on solution for you.

Pocket Printing is a powerful, flexible, and easy-to-use mobile device-based solution for printing bar code labels. It allows you to take labels created with label design and printing software, download them to your mobile device, and print them using a direct or wireless connection.

Pocket Printing Main Menu

VARIABLE DATA FEATURE	DESCRIPTION
Form Fields	Prompt the user for the field value at print time.
Date and Time Fields	At print time, the date/time is taken from the Pocket PC's operating system.
Database Support (dBase format)	Offers greater level of data accuracy. Local storage of database files for mobile convenience.
Serialization	Print sequential numbers such as serial numbers, shelf numbers, coupon/ticket numbers, etc.

Powerful

Includes advanced printing features for variable data such as database fields, serialization and more.

Flexible

Choose from a variety of printing options (Wired, WiFi, and Batch printing), and print to any of over 1000 supported thermal and thermal transfer printers.

Easy to Use

Fully integrated with label design software—design once for either platform. Pocket Printing's Graphical User Interface offers intuitive navigation.

How it Works

1. Design Your Label with TEKLYNX label design software. Just select a printer and design your label using text, bar codes, graphics and more.
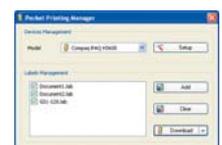

2. Select and Download Your Label. Download process is quick and easy, with counters and databases automatically downloaded along with the label design.

3. Print Your Labels Using a Direct or Network/Wireless Connection. Just select the label to print, enter any required variable information, and print wirelessly or to a wired connection.

1. Use existing label designs or create new labels using TEKLYNX label design software:
• Date/time fields
• When printed fields
• Counters
• Database connections

2. Select & download the label designs required on the mobile device:
• Counters, databases are automatically downloaded with the label design
• Download via Activesync™ on the PC or sync multiple devices via Windows networking

3. Use your mobile device to scan data & print labels without wires:
• WiFi compatible
• Or batch printing jobs
